Description			
<ul style="list-style-type: none">• A Web Service Call for Initiating Long Running Tasks• The web service receives the request and creates an entry in a table. This entry includes all the details.• After creating the database entry, the web service transfers the task to a RabbitMQ queue.• The task is retrieved from the queue by servers running workers for long running tasks.• The worker processes the task and stores the result in a designated area.

Implement Long Running Task Management System #16871

This implements a system to manage long running tasks. The design encapsulates database and queue interactions. It gives taskProcessor interface for declaring processors (business logic) for different types of tasks.
