Target version:	Sprint 26 Apr		
Description Request <pre>{ "id": "df84nsd...", "username": "johns", "email": "john@example.com", "firstName": "John", "lastName": "Smith", "emailVerified": true, "attributes": { "vendor": true }, }</pre> where • id or username is mandatory, to refer to the entity being updated • the rest of the fields are optional, and only those values which need to be updated will be present. The attributes object, if present, will replace the entire earlier object in the system • the enabled parameter is not permitted in the request. Use useractivate() and userdeactivate() instead, for audit and access control purposes. Response On success, an empty object will be returned. Reference : userupdate()
