Crux: BRE/WFE - Task #18005

WSC: change the parameters for the check_capabilities function call

26/02/2024 02:51 PM - Shuvam Misra

Status:	New	**Start date:**	
Priority:	Normal	**Due date:**	
Assignee:	Sachin Divekar	**% Done:**	0%
Category:		**Estimated time:**	0.00 hour
Target version:	Sprint 12 Apr		

Description

All WSC are making a call to a function called check_capabilities() (please correct the spelling here after checking with the source), which is supposed to return a boolean saying whether the request is authorised or not. This function call currently takes the user ID and the list of required capabilities. This is not enough -- the function will need to take the realm of the user too.

Therefore, the function signature needs to be changed to accept the Gin context object, not just the user ID. And it must also accept the app for which the operation is being attempted. (Some operations require app-specific capabilities.)

This task will modify the signature of the check_capabilities() function and also edit the code of all the WSC to pass the correct parameters to it.

Note that this task does not involve writing the real code for the function. It just involves changing the stub function signature and changing of all WSC code which calls the stub function.
